Press Release

June 21, 2011

Subject: Carnegie Seismic Retrofit – Consultant Selection

BOLA Architecture + Planning has been selected to lead the design of seismic retrofit improvements to the City of Snohomish Carnegie Building. A Seattle firm, BOLA has worked with the city on prior phases of the Carnegie rehabilitation effort.

The following ten consultant teams submitted qualifications for the Snohomish Carnegie Seismic Retrofit Project. The City was pleased with the extraordinary level of work displayed in the submittals received, and review by city representatives of the submittals provided by the ten interested teams indicated that the selection of BOLA Architecture will best meet the needs of the City.

Funded largely through a Federal Emergency Management Agency (FEMA) Hazard Mitigation Grant Program and Washington State Department of Emergency Management funds, construction of the seismic upgrades is anticipated to begin in 2012.
